EDUROAM – Education Roaming

Sapienza uses the Wi-Fi connection services of the EDUROAM (Education Roaming) federated network, a service that allows mobile users from other organizations to easily and securely access the wireless network using the same credentials provided by their own organization.

• What is EDUROAM?

EDUROAM is a **secure wireless network**, developed for the community of universities and research institutions, used worldwide by millions of users from thousands of universities in more than 100 countries.

EDUROAM allows users of any institution participating in the initiative to connect to the Internet at the access points made available by their own university or by the host university in Italy and abroad.

EDUROAM – Education Roaming

• How it works and who is EDUROAM for?

Access to the EDUROAM network is allowed via smartphones, tablets or laptops.

The service is aimed at students, teaching staff, researchers, research fellows, PhD students, and technical and administrative staff (@uniroma1.it or @studenti.uniroma1.it users).

The service is also aimed at all Sapienza guests who are part of institutions belonging to the EDUROAM federation.

The use of and access to the EDUROAM network is defined in the Eduroam Policy Service Definition (all official information is available on the website <u>https://www.eduroam.org/</u>)

How to connect

 To access EDUROAM, all you need to do is carry out a one-off* configuration operation on your devices (tablets, smartphones, laptops) to install a digital certificate (CAT) that enables them and makes them safe to navigate.

* Note. Each time you change the password of your institutional email account, you must re-authenticate yourself to the eduroam network by entering the new pw of your choice (relaunch the "geteduroam" app and repeat the procedure from step 2).

MOBILE ACCESS

Before proceeding with the instructions here described, please remove any eduroam profiles already available on your device.
